

How Area Agencies on Aging are using Claris Companion to address Social Isolation

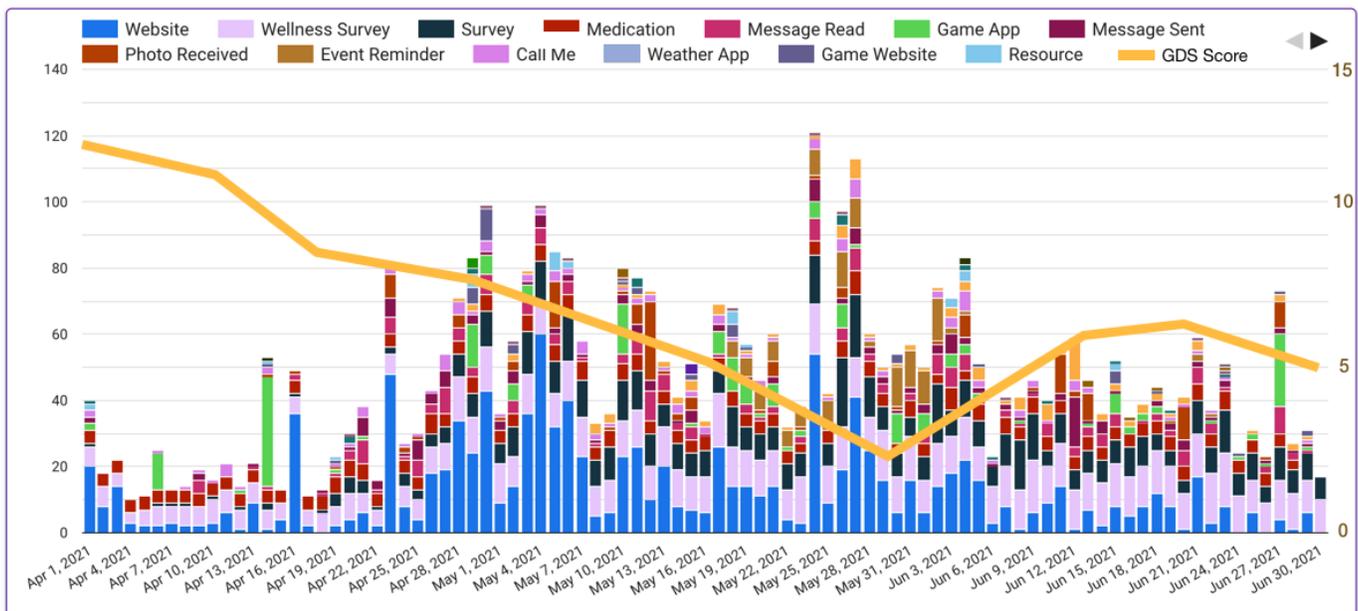

OVERVIEW

Claris Healthcare is proud to be working with senior care organizations including dozens of Area Agencies on Aging across North America to fight against senior social isolation using **Claris Companion**.

We offer a unique combination of intuitive senior-friendly software, internet connected tablets, and implementation services to improve the well-being of older adults at home. Most importantly, **Claris Companion** includes a care management dashboard for agency staff, reporting, and analytics to deliver true visibility into your programs' success.

Claris Companion has already been proven to be easy-to-use, fun, and affordable. Area Agencies on Aging, Meals on Wheels, State Ombudsmen, County Governments, and other Senior Care Agencies depend on Companion as a direct channel of communication to the seniors in their community - even if they don't have any experience using technology. Companion offers many features including video calling, messaging, virtual events, web browsing, surveys, wellness checks, medication reminders, photos, videos, and more.

Tablet Interactions vs Geriatric Depression Scale (GDS)

We understand the importance of data for evidence-based programs. The built-in **Claris Insight** reporting & analytics system allows you to visualize your client's usage and engagement data in real time to prove your program's overall success. Claris has even incorporated gold-standard social isolation and depression surveys that have proven that using **Claris Companion** improves mental and physical well-being.

Atlantic County Area on Aging launched **Claris Companion** on February 2021, the data below shows exactly how they were able to decrease social isolation and depression over 8 months:

Features	Interactions
Total Participants:	84
Total Tablet Interactions:	106,729
